The IF2035 interface modules are designed for easy connection of Micro-Epsilon sensors to Ethernet-based fieldbuses. The PROFINET, EtherNet/IP and EtherCAT modules are compatible with sensors that output data via an RS422 or RS485 interface. Depending on the interface used, one sensor (with RS422) or several sensors (with RS485) can be connected via one module. These modules operate on the sensor side with up to 4 MBd and have two network connections for different network topologies. Installation in control cabinets is via a DIN rail.

The interface modules are compatible with multiple sensors:
